FOR IMMEDIATE RELEASE  
March 6, 2009

### NETAFIM USA INTRODUCES SCAN-KLEEN SCREEN FILTERS Featuring Quick and Easy Manual Cleaning Without Flow Interruption

**Fresno, CA** – Netafim USA, the industry leading manufacturer of drip/micro irrigation systems, has introduced a new line of easy to clean screen filters – Scan-Kleen Screen Filters. When cleaning the filter, there is no need to manually disassemble, clean the screen and reassemble the filter. Just open the flush valve and turn the handle to rotate the dirt collector. The combination of rotation and linear movement scans and cleans the whole internal screen surface. Water flow to the field is not interrupted during the cleaning process. Scan-Kleen Screen Filters are available in angle or twin styles, several sizes and screen mesh options.

Additional features:

- Corrosion-proof high density polypropylene will not rust or corrode like metal filters
- Operates efficiently at varied flow rates

The Scan-Kleen Screen Filter is used as a primary filter for well water with small amounts of sand, center pivots and reservoir water with small amounts of algae. The stainless steel screen provides strength and long life durability.

Awarded **ISO 9001:2000 Certification** by the International Organization for Standardization – Netafim USA is the largest growing division of the Netafim International Group, the pioneer of micro-irrigation technology. With over 44 years in the irrigation industry and global expertise in more than 120 countries, Netafim offers a full-line of products for a variety of markets including agriculture, landscape, greenhouse, nursery, mining and wastewater. Netafim USA is headquartered in Fresno, California.
