NETAFIM USA INTRODUCES SINGLETNET SINGLE CABLE CONTROL SYSTEM

An Economical, Reliable and Expandable
Two-Wire Single Cable System

Fresno, CA – Netafim USA, the industry leading manufacturer of drip/micro irrigation systems, has introduced a new addition to our Crop Management Technologies line – the SingleNet Single Cable Control System. Whether you have 2 or 250 valves in the field, the SingleNet System allows you to run your network further, expand the system when needed and reduce costs. Expensive multi-wire control systems are replaced with an economical two-wire single cable that controls up to 255 field valves and allows feedback to the controller from various sensors throughout the network.

Additional features:

- Expandability
The savings increase as the system grows
- Simultaneous Control of Multiple Valves
Open and close valves with or without delays
- Improved System Protection and Reliability
Excellent surge protection and lightning resistance
- Two-Way Communication
Quick and efficient signal transmission

Compared to a traditional multi-wire system, a SingleNet System will save labor, materials and operating costs and the more the system expands, the more you save. Using this economical solution allows better control and monitoring of your system, greater reliability and most importantly, peace of mind.

Awarded **ISO 9001:2000 Certification** by the International Organization for Standardization – Netafim USA is the largest growing division of the Netafim International Group, the pioneer of micro-irrigation technology. With over 44 years in the irrigation industry and global expertise in more than 120 countries, Netafim offers a full-line of products for a variety of markets including agriculture, landscape, greenhouse, nursery, mining and wastewater. Netafim USA is headquartered in Fresno, California.
