### NETAFIM USA INTRODUCES THE DYNAMIC AIR VENT

#### Revolutionary Diaphragm Controls Air Discharge and Intake

**Fresno, CA** – Netafim USA, the industry leading manufacturer of drip/micro irrigation systems, has expanded its Air Vent Product line to include the Dynamic Air Vent. This air vent reacts very quickly to vacuum in pipelines by taking in large amounts of air – three times more air than other vents.

The Dynamic Air Vent is ideal for discharge of large amounts of air typically found at pump and filter stations. It is a recommended, economic alternative on large pipelines where typically several standard air vents must be used. Available with a 2" NPT Male Threaded connection and a maximum operating pressure of 150 psi.

Additional features include:

- Air vent is normally closed when the line is not operating preventing debris and contaminants from entering the pipeline
- Rolling diaphragm allows air to be discharged in a controlled and gradual manner preventing water hammer
- Built-in outlet connection for surplus water drainage
- Light-weight and small for easy installation
- Corrosion-resistant composite materials

When properly placed, Netafim's Dynamic Air Vent ensures maximum protection of your irrigation system. You can't afford not to use this product.

Awarded **ISO 9001:2000 Certification** by the International Organization for Standardization – Netafim USA is the largest growing division of the Netafim International Group, the pioneer of micro-irrigation technology. With over 44 years in the irrigation industry and global expertise in more than 120 countries, Netafim offers a full-line of products for a variety of markets including agriculture, landscape, greenhouse, nursery, mining and wastewater. Netafim USA is headquartered in Fresno, California.
