

# Streamline™ X Ultra Low Flow

Lowest Filtration Requirement on the Market

Color Normalized Difference Vegetation Index (NDVI)  
From \*Ceres Imaging

Streamline X thinwall dripline is the perfect choice for row crop growers. It's seamless construction and internal and external ribbing make for a stronger more durable product. Available with variable dripper spacings, flow rates and wall thicknesses allowing growers to customize systems based on required application rates and soil conditions. The already superior Streamline X family now includes a dripper with an ultra-low flow rate.

 **.07 GPH at 10 PSI!**

**Ultra-Low Flow rate dripper out performs the competition**

- Low flow emitter allows for close spacing without over irrigating
- No sprinkler needed to germinate

**Lowest filtration rate available for this flow (120 Mesh)**

- Keep the same filter you would use for any other Netafim dripper with the advantage of a lower flow rate
- Lower filtration requirements mean higher plugging resistance

**The only dripper of its kind on the market**

- Molded drippers offer a very consistent and uniform flow rate
- Uniform irrigation application in the field increases crop uniformity and yield
