## SNETAFIU" TYPHOON" PLUS TWD QUICK GUIDE

## Drip Tape

/ How to read tape label

/ OPEN FIELD ROW CROPS - ON SURFACE OR SUBSURFACE (SDI)
Typhoon Plus is the ideal solution for multi-season crops such as processing tomatoes, fruits, vegetables, corn, soybeans, and many others.

## / FLAP OUTLET ON SUBSURFACE (SDI)

- The flap prevents the penetration of sand/soil into the dripper bath area and therefore minimizes the possibility of clogging.
- Due to the relatively small water passage of the flap outlet, it acts as a physical barrier and substantially reduces the:
- penetration of roots into the dripper
- penetration of sand/soil into the dripper

Maximum Pressure Ranges

| Wall Thickness | Operating <br> $(\mathrm{psi})$ | Flushing <br> $(\mathrm{psi})$ |
| :---: | :---: | :---: |
| 638 SERIES 8 MIL | 15 | 21.8 |
| 638 SERIES 10 MIL | 17 | 26.1 |
| 638 SERIES 13 MIL | 26 | 39.2 |
| 638 SERIES 15 MIL | 32 | 47.9 |
| 875 SERIES 8 MIL | 12 | 17.4 |
| 875 SERIES 10 MIL | 15 | 21.8 |
| 875 SERIES 13 MIL | 22 | 32.7 |
| 875 SERIES 15 MIL | 26 | 39.2 |
| 990 SERIES 13 MIL | 17 | 26.1 |
| 990 SERIES 15 MIL | 20 | 30.5 |
| $11 / 8$ SERIES 13 MIL | 16 | 24.0 |
| $11 / 8$ SERIES 15 MIL | 17 | 26.0 |
| $13 / 8$ SERIES 15 MIL | 17 | 25.5 |

## / LENGTH OF RUN CHARTS: COMMON SPECS

NOTE: Information contained in these Length of Run Charts represents single lateral uniformities only. For further detail regarding block and system uniformity, please contact your Irrigation Design Professional.

| Tomatoes and Alfalfa <br> Max length of Run (FT) based on Emission Uniformity |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| TPF87513.16-1240 | GPM/100FT | 94\% | 92\% | 90\% |
| $\begin{gathered} \text { Typhoon } 87513.5 \mathrm{MIL} \\ 0.16 \text { GPH } 12.00 \mathrm{IN} \\ 4000 \text { FT Flap } \end{gathered}$ | 0.267 | 1,065 | 1,287 ${ }^{\prime}$ | 1,477 |
| TPF87513.16-1440 | GPM/100FT | 94\% | 92\% | 90\% |
| $\begin{gathered} \text { Typhoon } 875 \text { 13.5MIL } \\ 0.16 \text { GPH 14.00 IN } \\ 4000 \text { FT Flap } \end{gathered}$ | 0.229 | 1,180' | 1,425 | 1,623 |

## / TWD Commonly Used Equations

Information Needed:
GPH of emitter, (gph) = A
Spacing of emitters, (inches) $=B$
Solution: $D=\frac{A \times 231.12}{B \times C}$
Spacing between drip lines, (inches) $=\mathrm{C}$

Find: Application Rate, (inches/hour) = D

1. Converting GPH to GPM per 100 ft

Information Needed:

GPH of emitter, (gph) = A
Spacing of emitters, (inches) = B
Solution: $D=\frac{A \times 20}{B}$

Find: GPM / 100' = C
2. Calculating GPM per Acre (gpm/ac)

GPH of emitter, (gph) = A
Spacing of emitters, (inches) $=B$
Spacing between drip lines, (inches) $=C$

Find: GPM per Acre, $(\mathrm{gpm} / \mathrm{ac})=\mathrm{D}$
3. Calculate Precipitation Rate or Application Rate (inches/hour)
(This is for full soil coverage over 100\% of the area)
