

STREAMLINE PLUS™

UP TO
30%
STRONGER

THE INDUSTRY'S HIGHEST QUALITY, MOST DURABLE AND EASY TO USE THINWALL DRIPLINE

INTRODUCING THE INNOVATIVE STREAMLINE PLUS THINWALL DRIPLINE

Why settle for a lower quality 'tape' product? Streamline Plus is a superior choice for your irrigation needs. It's a non-pressure compensating thinwall dripline with improved durability and value added packaging. Streamline Plus is the best choice for seasonal row crop irrigation since it offers seamless construction, a low filtration requirement and flap outlet protection which deters soil ingestion and root intrusion.

IMPROVED DURABILITY: Stronger to Last Longer

Enhanced polyethylene properties allow for improved durability and up to **30%** higher tensile strength.

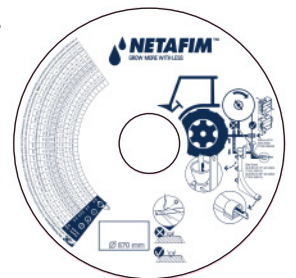

- **Durability improves irrigation performance** - stretching and pulling during installation or after won't affect the dripper's flow path which means you'll have consistent water flow.
- **Added resistance protects the dripline** - this allows for higher operating pressures and protection against damage that can result if higher pressures are required for proper flushing.

VALUE ADDED PACKAGING: Lowers Installation Time

Streamline Plus has new value added packaging containing installation and technical recommendations.

- **Arrows assist installers** - the reel belly wrap has directional arrows to assist with installation and dual colors for easy identification.
- **Step by step installation graphics** - the reel ends are white and contain visual graphics for the installation of the dripline with an injection machine and written guidelines for working pressure, wall thickness, etc.

**LOOK FOR THE
ORANGE STRIPES**
